

AMD Connect

Discover a seamless wireless experience. Discover the vision of AMD.

It's all about a better wireless connection experience. The AMD Connect utility works with multiple PC platforms to make network connectivity smarter, faster, safer.

Product overview

For today's highly mobile notebook computer user, the AMD Connect utility takes the confusion out of connecting to the best available, most appropriate network. Advanced architecture and innovative algorithms quickly identify all available networks, then use your pre-set criteria to establish a fast, effective, and safe network connection – all automatically.

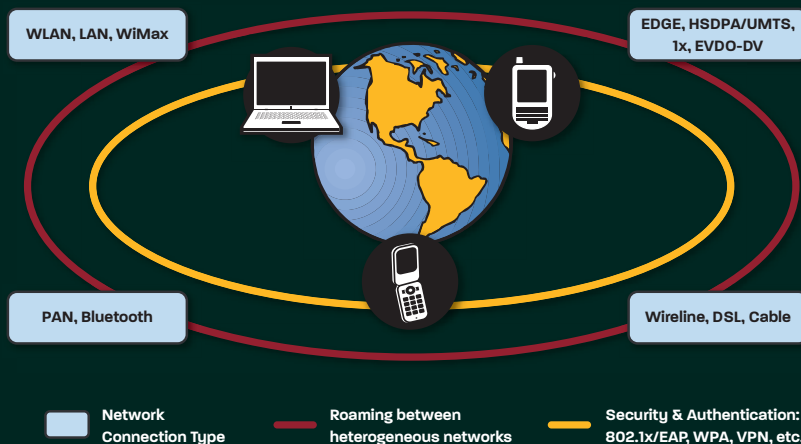

Lost time and wasted energy – reduce inefficiencies now.

Current studies estimate that an average mobile worker can waste \$2,000 per year simply looking for the right network connection. A typical mobile work location can consist of a confusing tangle of possibilities:

- Wireless LAN
- Wireless Broadband WAN
- Cellular
- WiMAX
- Bluetooth
- Cable
- DSL
- Dial-up
- Many others

AMD Connect quickly locates the best connection and automatically creates a secure, efficient connection. You establish the parameters – based on speed, security, network type, hardware capabilities, and more. AMD Connect remembers your preferred locations – home, work, café – and stores the keys for you to connect rapidly and automatically.

AMD Connect provides seamless connectivity to all available networks and can be configured using your parameters to maximize data transfer and safety.

More control, Better security, Greater efficiency.

Product features

AMD Connect delivers a variety of benefits that make this easy-to-implement utility a must-have for virtually any organization that relies on mobile connectivity.

- Protect valuable data by specifying which networks and data transfer protocols can be selected
- Stay connected even when moving – vital for data such as video, IM, and subscription-based, over-the-air digital content
- Automatic reconnect to current or better network when available
- Carrier and IT-grade software delivers rugged, robust performance across all PC platforms
- Automated authentication and log-on options – including pop-up screens for VPN access and public hotspots

For a better connection to tomorrow's world of computing, connect with AMD today.

AMD Connect delivers a wealth of user benefits.

Intelligent Connectivity

Multi-network environments can now be viewed as a single unified network; a mobile worker will never have to worry about connectivity, as the software provides an "always on, always connected" session seamlessly, transparently, and securely.

Session Persistency

AMD Connect is equipped to keep a user's session alive, thus safeguarding mission-critical information and data when roaming from network to network.

VPN Management

AMD Connect automatically launches and monitors third-party VPN (Virtual Private Network) clients. This increases network security by enforcing secure data transfers over non-secure networks such as public hotspots.

Security & Profile Management

AMD Connect allows IT administrators to securely manage and centrally deploy user profiles and configurations to end-users. Dynamic authentication, network, and roaming preference updates reduce end-user setup time and maintenance and support costs.

Scalability

AMD Connect framework is a proven fit with a wide variety of mobile devices and technologies.

Find out how AMD can help you save money and time with efficient and more productive computing.
